

Since their beginning in 1989, Aerospace Dynamics International, Inc. (ADI) has grown to become internationally recognized as one of the Worlds' most respected suppliers of large, complex machined parts and assemblies to the commercial and military Aerospace Industry. ADI is a supplier to virtually every major aircraft manufacturer to include Airbus, Boeing, Lockheed and Spirit Aerosystems.

Their 250,000-sq. ft. facility currently houses some of the largest, most technologically advanced 5 and 6 Axis High-Speed and Wide-Range machining centers in the industry, capable of high volume production of very large complex components both in Aluminum and Titanium. With an aggressive commitment to continual growth and technological evolution, ADI is currently undergoing a major expansion that includes an additional 150,000-sq. ft. of manufacturing space and over \$25 million in capitol equipment and facilities.

RRM was always the driving force for their operation. According to Monty Peterson, Contracts Manager, "RRM is a good match with our organization as it provides a cost efficient method, which has the necessary tools to track and analyze our company's performance to target.

We continue to incorporate further ERP capabilities of the software into our manufacturing process, which further improves our companies overall effectiveness."

SPOTLIGHT

- **Reduction of 20% to 50% in data entry time in most areas where routine data entry is required.**
- **Ease of export data to custom reports using the Form List function and Crystal Reports option.**
- **User Defined Fields has also allowed ADI to utilize the RRM system for other necessary reports that were previously managed outside the ERP system.**

ADI uses multiple windows and list options to better analyze and respond to system demands, thus allowing ADI to remove multiple custom worksheets that were used to track parts.

This ability combined with User Defined fields, allows ADI to customize some of the data into ProfitKey greatly enhancing their ability to USE the system.
