The Estimating Module maintains quotations for make-to-order items. Item and component availability can be verified for realistic delivery planning.

- Creates new quotes by copying information from any quote, order, or bill of material.
- Provides extensive “what if” analysis to determine delivery date using real-time capacity availability, and current material availability.
- Allows adding new customers and items to the database “on-the-fly.”
- Maintains item details, material requirements, and routing in the quote.
- Organizes all material, labor, and tool costs related to the quote in one structure.
- Optional interface to popular CAD systems.
- Allocates materials, tools, and outside services to specific operation schedules.
- Allows extensive notes.
- Allows multiple quote quantities per line item.
- Costing spreadsheet that supports five quantities for QTY price break.
- Supports percentage mark-up, fixed mark-up, and direct price entry.
- Allows separate purchased parts mark-up.
- Allows user selected variable format custom quote forms.
