

Inventory Data Collection

- Receives purchase orders and processes returns to vendors.
- Tracks material issued to work orders and returns of material to stock.
- Receives finished products from work orders and material returns.
- Utilizes standard symbol laser scanner to read barcodes.
- Processes shipments for customer order delivery.
- Displays the Work Order for which the Purchase was made and allows direct issue to the Work Order.
- Allows creation of Serial No. or Controls Lots at Purchase Order receipt time.

The Inventory Data Collection module utilizes bar code technology for fast and accurate processing of purchase order receipts, material issues, and shipments.
